

Italian Hall Disaster of 1913

We all know that falsely yelling "fire" in a crowded place is not protected under the first amendment, the right to free speech. The case that made this determination was tried in the US Supreme Court in 1919.

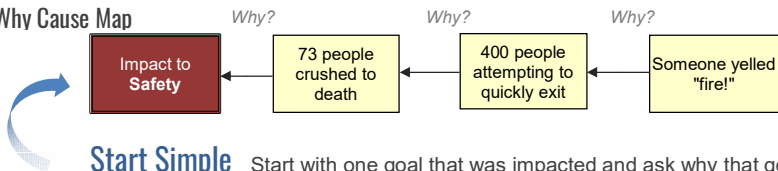

Six years earlier 73 people, mostly children, lost there lives trying to escape a Christmas party when someone did just that, yelled "fire!." Over 400 miners and families were attending a party on Christmas Eve when the event happened.

We can use the three steps of Cause Mapping to take a closer look at this incident and what can be done to prevent similar incidents from occurring in the future.

Step

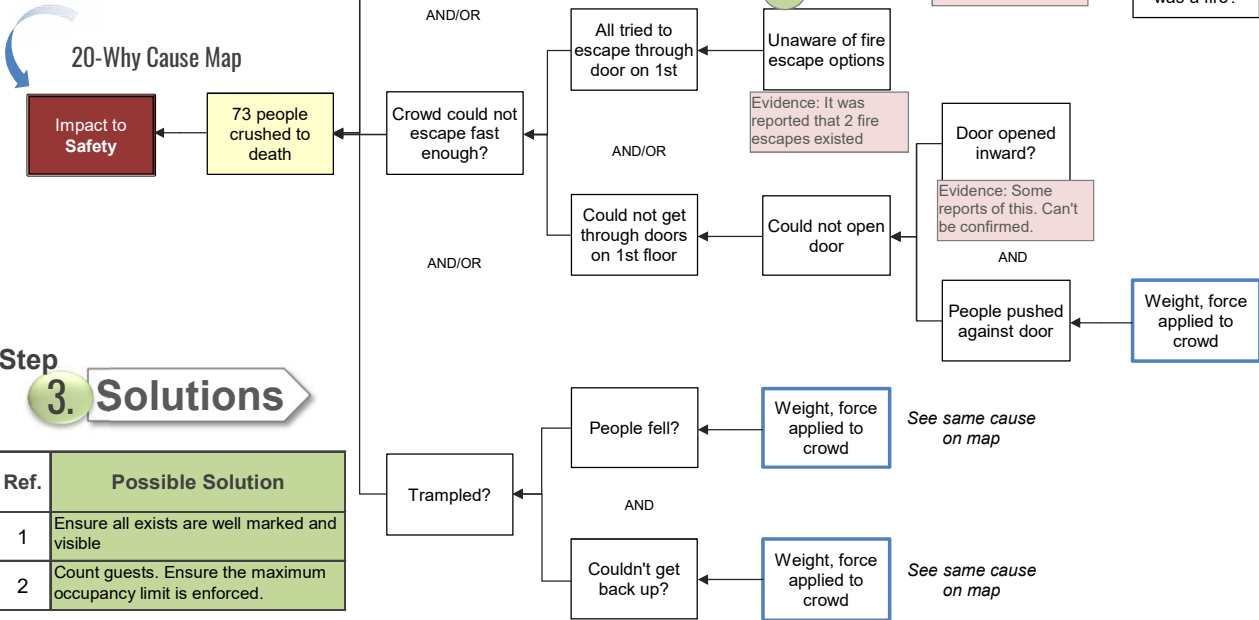

2. Analysis

3-Why Cause Map

Start Simple Start with one goal that was impacted and ask why that goal was impacted. Investigating a problem begins with the problem and then backs into the causes by asking Why questions.

Expand as Needed Break the problem down into a visual map. Using a Cause Map provides a thorough and visual explanation. Cause Maps reveal all of the causes required to produce the problem.
