

## Using a Cumulative Cause Map™

A large, kidney-shaped swimming pool with a concrete deck and a white ladder, surrounded by lush landscaping and a white fence.

This same approach can be applied to an issue within your organization. Making a diagram of the different causes is a simple way to organize detail. This visual approach makes it easier to see how risks can be mitigated. This type of analysis can be done for the areas of your operations with recurring issues where risk must be reduced.
